

High Intensity Training on EHS Management Systems for Enhanced Performance

Overview

Environmental, Health and Safety (EHS) management systems and certification of them can – if approached in the right way – provide extraordinary levels of support to those who are striving to deliver meaningful EHS performance improvement. Designed for individuals who are excited by the prospect of delivering real change in the way EHS is managed within their organizations, ERM CVS' training seminars on implementing and auditing EHS management systems provide participants with the means to achieve extraordinary results from their investment in EHS management systems.

ERM CVS' 1-day executive briefing on Using ISO 14001 and OHSAS 18001 to Address Increasing Business Risk Arising From EHS is designed to provide business leaders with powerful insights into the quite phenomenal, deeply dynamic and very broad-based growth of concerns about EHS issues and the practical implications of these developments for business. The session also provides business leaders with an understanding of the actions they can and should take to ensure that their businesses are properly positioned to address these concerns and how they can harness management systems and third party certification of them to international standards to address these challenges.

The session will be of great value to organizational leaders keen to look beyond the headlines and would like to understand the real business case for action.

ERM CVS' 3-day session on Using Environmental Management Systems and Certification to Transform Performance Through Behavioural Change provides participants with a deep understanding of the factors that are driving environment forward as a concern for business; a thorough understanding of the ISO 14001 standard; and – crucially - how to use management systems and certification to deliver substantive and sustainable improvements in environmental performance through behavioural change. When focused on behavioural aspects management systems can deliver dramatic reductions in incident rates, much better compliance with regulations and substantive reductions in ongoing impacts on people and the environment arising from normal operations. We also introduce participants to the innovative environmental management systems assessment techniques, which ERM CVS has developed for its own work in this field.

This highly motivational session will be of tremendous value to anyone who is involved in the roll out or maintenance of management systems within their organizations, especially those who are excited by the prospect of using management systems to deliver very real and meaningful improvements in performance.

ERM CVS' 3-day session on Using Management Systems and Certification to Transform Occupational Health and Safety Performance Through Behavioural Change. The course covers similar ground to the ERM CVS' 3-day session on Using Environmental Management Systems and Certification to Transform Performance Through Behavioural Change but covers materials specific to occupational health and safety. This new session provides participants with a thorough knowledge of the OHSAS 18001 standard (including requirements related to conducting risk assessments) and how OHS management systems and certification of these can be harnessed to deliver a step change in OHS performance.

ERM CVS' 5-day IEMA accredited, Lead Environmental Auditor Training Course also provides participants with a deep understanding of the factors that are driving environment forward as a concern for business; a thorough understanding of the ISO 14001 standard; and – crucially - how to use management systems and certification to deliver substantive and sustainable improvements in environmental performance through behavioural change. Participants work through additional materials on environmental regulations, ISO 19011 – the management systems auditing standard together with a number of modules designed to immerse participants into ERM CVS' innovative EMS auditing techniques and help to develop their auditing skills. ERM CVS' management systems auditing methodology focuses heavily on environmental outcomes (risk control, compliance with regulations, and reductions in impact) and the management and operator behaviours that give rise to these outcomes. The application of the techniques consistently delivers dramatic performance improvement.

High Intensity Training on EHS Management Systems for Enhanced Performance

Overview

This session – which receives extraordinarily positive feedback from participants - is designed to build the competence of audit managers, experienced auditors and those new to auditing in the environmental field who are keen to ensure that their work here will give rise to measurable and substantive environmental performance improvement within their organizations. ERM CVS 5-day session on EHS Management Systems Implementation and Auditing for Enhanced EHS Performance.

This comprehensive course provides participants with a deep understanding of the factors that are driving EHS forward as a concern for business; a thorough understanding of the ISO 14001 and OHSAS 18001 standards; and – crucially - how to use management systems and certification to deliver substantive and sustainable improvements in EHS performance through behavioural change. The session also immerses participants in innovative techniques of EHS auditing that ERM CVS has developed for its work in this field. ERM CVS sessions tackle head-on, the rising – and justified – concern with traditional approaches to the implementation, auditing and certification of EHS management systems, which studies have found deliver little in the way of tangible performance improvement.

All ERM CVS training sessions are highly interactive. Techniques used by the trainers together with a series of thought-provoking case studies interspersed with practical group exercises maintain very high levels of participant engagement. ERM CVS trainers are selected because of their outstanding abilities to communicate and their substantial practical experience in management systems development, implementation and assessment. Instructors have completed formal environmental management system certification assessments.

We have described our approach to training in the sections that follow and provided some examples of feedback we have received on our training sessions, which are regarded by many as the best in this field.

Executive Briefing on Using ISO 14001 and OHSAS 18001 to Address Increasing Business Risk Arising from Environment, Health, and Safety (EHS) – ERM CVS' 1-day Executive Briefing

Module 1 – Introduction

The introductory module provides instructors and participants with an insight into the background and experience of those attending the course. We recognize the value that participants bring to a session such as this, and our instructors continuously encourage active participation from all participants, at all times. The instructor provides an overview of the program and discusses the objectives for the course.

Module 2 – EHS: A Source of Increasing Business Risk

Anyone who is exposed to children or young adults understands that there is a rising tide of concern about the environment and well being. In this module, the instructor leads the group in a discussion on the quite phenomenal, deeply dynamic and very broad-based growth of concerns about these issues and future developments in this regard. They will also discuss the practical implications of these developments for business.

Module 3 – Are Your Operations Properly Equipped to Address the Rising Challenge from the EHS? If not, why not?

The instructor leads a discussion on participants' concerns about the existing EHS programs within their organization, the obstacles they face in trying to meet established EHS management goals, and the issues which concern them in their capacity as individuals who need to contribute to the development of the EHS function within their organization.

Module 4 – Where is the Organization Today

Where possible the instructor would use recent audit findings to provide the organization's leadership with insights into the current status of EHS management within their operations.

This presentation would use photographic material to characterize the sorts of physical issues, which are arising with the operations as well as describing the practical weaknesses in management of EHS, which are giving rise to suboptimal performance outcomes.

Module 5 – ISO 14001/OHSAS 18001: A Checklist For Good EHS Management – A Ten Minute Introduction to the Standards

Those involved in the implementation of ISO 14001 or OHSAS 18001 are often frustrated by the lack of consistency in interpretation of the standards. Managers can, and do, spend many hours in detailed and often futile discussions about the meaning of the standard. ISO 14001 or OHSAS 18001, if read and used in the right way, is a very simple list of common sense actions that an organization should take if they are to properly address EHS issues associated with their operations.

Module 6 - Manage EHS Business Risk

Business leaders should be concerned about the value that certification to ISO 14001 or OHSAS 18001 and similar initiatives bring to their organization. Like its sister standard, ISO 9000, these standards are often criticized because they are costly to implement and – more often than not – deliver little in the way of tangible benefits. Approached in the right way, EHS management systems and their certification can be used to deliver dramatic improvements in EHS performance outcomes, preventing reputation-wrecking incidents, delivering markedly improved compliance with regulations and substantive reductions in impacts on people and the environment arising from normal operations. All are good outcomes for the reputation and the bottom line of the organization.

In this module delegates will learn why many studies are finding that many – and possibly most – organizations are failing to obtain any real value from their management system initiatives and certification. Participants will also be guided through a series of eight steps to harness the power of EHS management systems and certification and the resources that are devoted to it, to deliver a certificate and a real shift in the quality of EHS outcomes through behavioural change.

Module 7 – Certification: Application to Approval

In this segment, the instructor reviews the objectives for each element of the ISO 14001 and OHSAS 18001 assessment process and how managers can use their certifiers as a positive force to support their efforts to deliver effective management of EHS within their organizations.

Module 8 – Where to From Here and the Role You Should Play

In this module, the instructor will guide the delegates through a series of questions to help set the direction of subsequent actions for them and others in their organizations – all intended to ensure that the organizations are much better equipped to address the increasing business risks arising from EHS aspects.

Arranging an Executive Briefing. This is offered in-house only.

Using Environmental Management Systems and Certification to Transform Performance Through Behavioural Change – ERM CVS' 3-day EMS Course

Module 1 – Introduction

The introductory session provides instructors and participants with insight into the background and experience of those attending the course. We recognize the value that participants bring to a session such as this, and our instructors continuously encourage active participation from all participants – at all times. The instructor provides an overview of the program and discusses the objectives for the whole session; introducing some key themes, provide insights into the style of the course and the rules of engagement.

Module 2 – Environment: A Source of Increasing Business Risk

Anyone who is exposed to children or young adults understands that there is a rising tide of concern about the environment. In this module, the instructor leads the group in a discussion on the quite phenomenal, deeply dynamic and very broad-based growth of concerns about environmental issues and future developments in this regard. They will also discuss the practical implications of these developments for business.

Module 3 – Are Your Operations Properly Equipped to Address the Rising Challenge from the Environment? If not, why not?

The instructor leads a discussion on participants' concerns about the existing environmental programs within their organization, the obstacles they face in trying to meet established environmental management goals, and the issues which concern them in their capacity as individuals who need to contribute to the development of the environmental function within their organization.

Module 4 – EMS Auditing and Certification: Language, the Players and their Roles

Participants are introduced to the language and players of EMS certification. Participants will consider the literal meaning of certification and how others can interpret it.

Module 5 – Making Sense of ISO 14001

Those involved in the implementation of ISO 14001 are often frustrated by the lack of consistency in interpretation of the standard. Managers can, and do, spend many hours in detailed and often futile discussions about the meaning of the standard. In this highly interactive module the instructor leads participants to a deep and comfortable understanding of ISO 14001 requirements and the real meaning of the requirements of the standard in an operational setting. Delegates will also learn why many studies are finding that many – and possibly most – organizations are failing to obtain any real value from their EMS initiatives and ISO 14001.

Module 6 – Eight Steps to Ensure that ISO 14001 Delivers a Step Change in Environmental Performance

Approached in the right way, EMS and ISO 14001 certification can be used to deliver dramatic improvements in environmental performance outcomes, preventing reputation-wrecking environmental incidents, delivering markedly improved compliance with regulations and substantive reductions in impacts on people and the environment arising from normal operations. All are good for the environment and the reputation and the bottom line of the organization. In this module, participants are guided through a series of eight steps to harness the power of environmental management systems and ISO 14001 and the resources that are devoted to it, to deliver a certificate and a real shift in the quality of environmental outcomes through behavioural change.

Module 7 – EMS Audit for Performance

Delegates will receive an overview presentation on ERM CVS' innovative EMS auditing methodology and audit techniques. ERM CVS' management systems auditing methodology focuses heavily on environmental outcomes (risk control, compliance with regulations, and reductions in impact) and the management and operator behaviours that give rise to these outcomes. The application of this methodology and accompanying techniques allow auditors to gain deep insights into the practical effectiveness of established approaches to environmental management and – where implemented effectively – to induce dramatic performance improvement.

Module 8 – Certification: From Application to Approval

In this segment, the instructor reviews the objectives for each element of the ISO 14001 assessment process and how managers can use their certifiers as a positive force to support their efforts to deliver effective management of the environment within their organizations.

Arranging a 3-day EMS Course. This is generally offered in-house.

Using Occupational Health and Safety Management Systems to Transform Performance

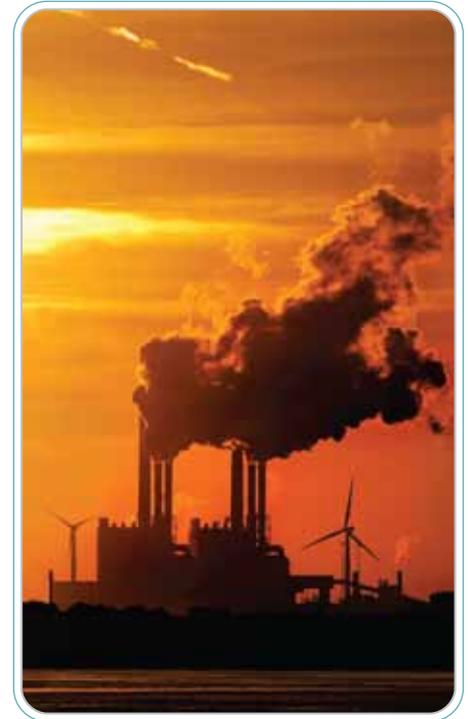

Most companies know that the business advantages of a safer, healthier workforce are considerable. As they strive to avoid lost productivity and claims due to illness and accidents, many will look towards integrating occupational health and safety management systems (OHSMS) with existing environmental management systems.

This course covers similar ground as the ERM CVS' 3-day session on Using Environmental Management Systems and Certification to Transform Performance Through Behavioural Change, but from an occupational health and safety (OHS) perspective. This session provides participants with a thorough knowledge of the OHSAS 18001 standard (including requirements related to conducting risk assessments) and how OHS management systems and certification of these can be harnessed to deliver a step change in OHS performance.

The following elements are examples of some of the topics to be presented during the course of the 3-day session:

- How to conduct valuable risk assessments;
- What a productive H+S audit looks like;
- How to engage all levels of management in driving H+S performance;
- Why management systems fail to deliver meaningful results;
- How does OHSAS 18001 compare and mesh with ISO 14001?

The sessions will include interactive discussions, small group work, enlightening videos and energetic presentations to not only expand participants knowledge but to get them to think in an entirely different manner with regards to Health and Safety Management Systems.

Lead Environmental Auditor Training – 5-day Lead EMS Auditor Course

Module 1 – Introduction

The introductory session provides instructors and participants with insight into the background and experience of those attending the course. We recognize the value that participants bring to a session such as this, and our instructors continuously encourage active participation from all participants – at all times. The instructor provides an overview of the program and discusses the objectives for the whole session; introducing some key themes, provide insights into the style of the course and the rules of engagement, the basis for evaluation of the delegates, and how each delegate can apply for accreditation with IEMA.

Module 2 – Environment: A Source of Increasing Business Risk

Anyone who is exposed to children or young adults understands that there is a rising tide of concern about the environment. In this module, the instructor leads the group in a discussion on the quite phenomenal, deeply dynamic and very broad-based growth of concerns about environmental issues and future developments in this regard. They will also discuss the practical implications of these developments for business.

Module 3 – Are Your Operations Properly Equipped to Address the Rising Challenge from the Environment? If not, why not?

The instructor leads a discussion on participants' concerns about the existing environmental programs within their organization, the obstacles they face in trying to meet established environmental management goals, and the issues which concern them in their capacity as individuals who need to contribute to the development of the environmental function within their organization.

Module 4 – EMS Auditing and Certification: Language, the Players and their Roles

Participants are introduced to the language and players of EMS certification. Participants will consider the literal meaning of certification and how others can interpret it.

Module 5 – Environmental Laws and Regulations

This module will provide participants with an overview of environmental legislative and regulatory framework in the country where the course is delivered.

Module 6 – The Broader ISO 14000 Series of Standards and Their Evolution

A review of other standards in the ISO 14000 series will be given. We will also cover how ISO standards are developed and who the key players are in these processes. An update on ongoing revisions to EMS standards will be provided.

Module 7 – ISO/IEC 17021 and IAF Guidance

Time will be spent reviewing the ISO/IEC 17021 and IAF Guidance - the official rulebook for certification bodies that provide accredited certification. The review will include highlighting key issues associated with implementation of the guidelines.

Module 8 – Pointers on Effective Presentations

being able to deliver effective presentations is one of the key skills that an auditor should possess. The instructor will provide pointers on how to maintain engagement and credibility in presentations you make.

Module 9 – ISO 19011: Guidelines for Quality and/or Environmental Management System Auditing

The instructor leads an interactive discussion on the requirements of ISO 19011. The instructor will specifically spend time on clauses 4, 5, 6 and 7 of the standard, which cover a number of key elements of the audit process, auditor team selection and auditing skills.

Module 10 – EMS Audit (Making Sense of ISO 14001)

Those involved in the implementation of ISO 14001 are often frustrated by the lack of consistency in interpretation of the standard. Managers can, and do, spend many hours in detailed and often futile discussions about the meaning of the standard. In this highly interactive module the instructor leads participants to a deep and comfortable understanding of ISO 14001 requirements and the real meaning of the requirements of the standard in an operational setting. Delegates will also learn why many studies are finding that most organizations are failing to obtain any real value from their EMS initiatives and ISO 14001.

Module 11 – Six Steps to Ensure that ISO 14001 Delivers a Step Change in Environmental Performance

Approached in the right way, EMS and ISO 14001 certification can be used to deliver dramatic improvements in environmental performance outcomes, preventing reputation-wrecking environmental incidents, delivering markedly improved compliance with regulations and substantive reductions in impacts on people and the environment arising from normal operations. All are good for the reputation and the bottom line of the organization. In this module, participants are guided through a series of six steps to harness the power of environmental management systems and ISO 14001 and the resources that are devoted to it, to deliver a certificate and a real shift in the quality of environmental outcomes through behavioural change.

Module 12 – EMS Audit for Performance

Through a number of case study exercises and presentations, participants will develop their EMS audit skills. This module builds on materials presented in earlier modules and is designed to immerse participants into ERM CVS' innovative EMS auditing techniques.

Module 13 – Certification: From Application to Approval

In this module, the instructor reviews the objectives for each element of the ISO 14001 assessment process and how managers can use their certifiers as a positive force to support their efforts to deliver effective management of the environment within their organizations.

Module 14 – Written Examination

A series of multiple choice, short answer and essay type questions are provided to the delegates for this proctored exam. Two hours will be allotted for this written exam.

EHS Management Systems Implementation and Auditing for Enhanced Environment, Health and Safety (EHS) Performance – a 5-day Course

Module 1 – Introduction

The introductory session provides instructors and participants with insight into the background and experience of those attending the course. We recognize the value that participants bring to a session such as this, and our instructors continuously encourage active participation from all participants – at all times. The instructor provides an overview of the program and discusses the objectives for the whole session; introducing some key themes, provide insights into the style of the course and the rules of engagement.

Module 2 – EHS: A Source of Increasing Business Risk

Anyone in business these days can attest to the dramatic, paradigm shifting changes affecting them from many aspects of their business. One dynamic aspect of the business with the most and lasting change has been sustainability. In this module, the instructor leads the group in a discussion on the quite phenomenal, deeply dynamic and very broad-based growth of concerns about sustainability issues and future developments in this regard as it pertains to environment, community, and well being of employees. They will also discuss the practical implications of these developments for business.

Module 3 – Are Your Operations Properly Equipped to Address the Rising Challenge from their EHS aspects? If not, why not?

The instructor leads a discussion on participants' concerns about the existing EHS programs within their organization, the obstacles they face in trying to meet established EHS management goals, and the issues which concern them in their capacity as individuals who need to contribute to the development of the EHS function within their organization.

Module 4 – EHS Management System Auditing and Certification: Language, the Players and their Roles

Participants are introduced to the language and players of EHS MS certification. Participants will consider the literal meaning of certification and how others can interpret it.

Module 5 – The Standards That Play a Role in EHS Management System Certification

A review of a series of standards and their role in the world of EHS management system certification, such as ISO/IEC 17021, IAF Guidance, and ISO 19011. In this module we also review how these standards are developed and who the key players are in these processes.

Module 6 – Pointers on Effective Presentations

Being able to deliver effective presentations is one of the key skills that an auditor should possess. The instructor will provide pointers on how to maintain engagement and credibility in presentations you make.

Module 7 – Case Study (Making Sense of ISO 14001 and OHSAS 18001)

Those involved in the implementation of ISO 14001 and/or OHSAS 18001 are often frustrated by the lack of consistency in interpretation of the standard. Managers can, and do, spend many hours in detailed and often futile discussions about the meaning of the standard. In this highly interactive module the instructor leads participants to a deep and comfortable understanding of ISO 14001 and OHSAS 18001 requirements and the real meaning of their requirements in an operational setting. Delegates will also learn why many studies are finding that many – and possibly most – organizations are failing to obtain any real value from their management system initiatives and certification.

Module 8 – Eight Steps to Ensure that ISO 14001 and/or OHSAS 18001 Certification Deliver a Step Change in EHS Performance

Approached in the right way, EHS management systems and their certification can be used to deliver dramatic improvements in EHS performance outcomes, preventing reputation-wrecking incidents, delivering markedly improved compliance with regulations and substantive reductions in impacts on people and the environment arising from normal operations. All of these outcomes are good for the reputation and the bottom line of the organization. In this module, participants are guided through a series of eight steps to harness the power of EHS management systems and their certification and the resources that are devoted to it, to deliver a certificate and a real shift in the quality of outcomes through behavioural change.

Module 9 – EHS Management System Audit for Enhanced Performance

Through a number of case study exercises, role plays, and presentations, participants will develop their EHS management system audit skills. This module builds on materials presented in earlier modules and is designed to immerse participants into ERM CVS' innovative management system auditing techniques which ERM CVS has developed for its own work in this field.

Module 10 – Certification: From Application to Approval

In this module, the instructor reviews the objectives for each element of the ISO 14001 and OHSAS 18001 assessment process and how managers can use their certifiers as a positive force to support their efforts to deliver effective management of EHS within their organizations.

High Intensity Training on EHS Management Systems for Enhanced Performance

p 8

Feedback on ERM CVS' Unique Training in the Management Systems Field

ERM CVS provides training on implementing and evaluating environmental management systems to personnel from organizations around the world. Training clients include American Airlines, Anglo American, ArvinMeritor, Baxter Healthcare, BP, Dow Chemicals, Huntsman Chemicals, Johnson & Johnson, MEMC Electronic Materials, Miami International Airport, Motiva Enterprises, Nike, Pfizer, Shell, Smiths Group, Statoil, The Texas Commission on Environmental Quality, and many others. A sample of the feedback from participants attending our training sessions follows.

"The focus on showing limitations and examples of ineffective EMSs was the most eye-opening. After coming into the seminar expecting a course on how to obtain ISO 14001 certification, I felt I got much more from the course in the manner it was presented. Our company is at a critical stage where we haven't invested enough time and money to have gone on the "wrong" track, but we may have been heading there without this training. The group involvement was the other main strong point. Nearly everyone was actively involved in the case studies, many even took them personally. I think the realistic presentation of the case studies done in the seminar made them much more effective."

– Ben Wylie, Applied Materials

"It was the most intense and rewarding training session I have ever encountered. For the next four to five days, I could not think about anything else. Implementing an EMS using the eight steps is now my goal."

– Mike Fowler, L-3 Communications

"Excellent instructor. It takes God-given talents to take a complex concept, grab and hold the attention of 20 participants for a week, break it down to its basic components, and make sure the participants totally understand its ins and outs by week's end... all without sounding smarter than thou. BRAVO!!!! In Texas, we take our 15-gallon cowboy hat off to you, sir."

– Salal Tahiri, Texas Commission on Environmental Quality

"Have never been in a training course like it before! The intense discussions and thought provoking style creates an extremely effective learning environment that keeps all participants fully engaged 100% of the time. Breaks down what you know about ISO 14001 and rebuilds it in a more focused way to ensure that you're doing what should be done to minimize impacts on the environment versus creating a burdensome document system which results in zero benefit to the environment and facilities implementing ISO 14001."

– Paula Valero, Nike Inc.

"Excellent presentation and interaction with the group. I had planned to attend for only 1 day, but was so impressed with the instructor that I arranged to return for days two and three."

– Professor Jim Westgate, Lamar University

"I can honestly say that this course was the best I have ever witnessed."

– Jonathan Garrett, Smiths Group plc

"The course focuses on driving continuous, real world HES performance improvement, rather than feeding a huge, ineffective ISO manual. The course walks participants through an auditing and certification framework that ensures HES management is fully integrated with the mainstream business management system on equal footing with cost, quality and productivity. The material is delivered using a highly interactive Socratic method, which teaches participants to use the tools provided to find the answers to case studies rather than just giving the answers outright. The course provides very valuable and timely insight for any business that needs to get HES right!"

– Jim Evans, Lead HES Auditor for Sunoco, Inc.

"This was not only one of the most educational three days on EH&S performance management systems, but also one of the most inspiring three days of learning I've ever experienced. I walked away with an understanding of the RC14001 EHS management system standard and an appreciation of the longterm intent / strategic direction of the standard. It was motivating and provided practical steps for moving forward with implementing and certifying to the RC14001 EHS management system requirements."

– Chhevi Sharma, Global Responsible Care ® Manager for Ashland

"This was one very fascinating course. The technique of forcing people to see the absurdity of conformance without thought is revolutionary. This course will shift paradigms."

– Thomas Vinson, Texas Commission on Environmental Quality

"It was without a doubt, the best training course that I have attended. You do an incredible job with the material and your passion for the subject is evident and becomes instilled in your students. I learned so much from you and I am grateful I had the opportunity to take the course with you as my instructor."

– Karen Wu, TSLG Johnson and Johnson Vision Care

"Interactive, challenging, innovative and thought provoking."

– Lindsay Callard, BP Sunbury

"I found the workshop to be the most inspiring I have ever attended. I am very excited about this course and cannot wait to start to sell it to my colleagues."

– Julie Clifton, Department of Defence, Australia

"I've been on a mission ever since the course finished and have already persuaded a number of people to sign up."

– Caroline White, Environmental Advisor, BP Aberdeen

"... I feel it is the best quality 5 days of learning I had - I was riveted to the point that even the breaks were an annoying interruption! And yes, I have found myself looking at things in a different way which is very refreshing. I am now eager (and very curious) to see what changes I can make here for the better."

– Fiona Plomer, Amersham plc.

High Intensity Training on EHS Management Systems for Enhanced Performance

About ERM Certification and Verification Services

ERM Certification and Verification Services (ERM CVS) is the global certification and verification company of Environmental Resources Management (ERM), one of the world's leading providers of EHS services. ERM CVS provides third party accredited certification to the ISO 14001 standard and the EU's EMAS scheme, as well as certification to OHSAS 18001. We also verify corporate sustainability reports and are among the world's first greenhouse gas emissions verifiers. Certification from ERM CVS is recognized as an outstanding mark of excellence in EHS management, particularly by those working in the EHS field, regulators, ethical investors, industry associations, and interest groups.

A non-executive Advisory Board oversees ERM CVS' activities. The Board is chaired by Derek Osborn (Chair of the influential UN EcoSoc Stakeholder Forum for a Sustainable Future and former Chairman of the European Environment Agency) and also includes Miles Seaman, representing the Institute of Chemical Engineers and Eileen Claassen, President from the Pew Centre for Global Climate Change.

ERM CVS is formally accredited by UKAS for ISO 14001 certification, EMAS registration and GHG verification. Our 5-day Lead environmental Auditor courses are accredited by IEMA in the UK. .
